C;Complex: trimer of heterotrimeric subunits consisting of 11K (gamma), 12K (beta), and
C;Complex: trimer of heterotrimeric subunits of one molecule of urea to carbon dioxide and tw
A;Description: catalyzes the hydrolysis of one molecule of urea to carbon dioxide and tw
C;Superfamily: urease, gamma subunit; urease 11K chain homology
C;Keywords: heterotrimer; hydrolase; metalloprotein
F;1-100/Domain: urease 11K chain homology <UII>

"Purification and N-terminal analysis of urease from Helicobacter
                                                                                                                                                                                                                                                                                                                                                                                                     Nat. Struct. Biol. 8:505-509(2001).
-1- CARALYITC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).
-1- SUBUNIT: Heterohexamer of 3 alpha and 3 beta subunits. Four heterohexamers assemble to form a 16 nm spherical complex.
G.I., Blaser M.J.;
urease from Helicobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EMBL, X17079; CAA34932.1; -; Genomic_DNA.

## ALIGNMENTS

```
The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an urease X subunit polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel Helicobacter felis urease X and Y subunit polypeptides, useful in the diagnosis of Helicobacter felis infections and in the preparation of

The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.

The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis infections the leicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis infections Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

Helicobacter pylori cellular proliferation protein #188

14-FEB-2002 (first entry)

AAU35875 standard; protein; 238 AA

AAU35875

```
Novel isolated nucleic acid molecule having urease gene cluster, and conferring on Helicobacter bizzozeronii ability to produce urease, useful as vaccine for preventing disease in mammals infected by H.bizzozeronii.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 CMHFLKKDEVMPGVGNMVPDLGVEATFPDGTKLVTVNWPIEPDEHFKA-GEVKFGCDKDI 119

The invention relates to an isolated nucleic acid molecule conferring on Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease extructural gene and at least one urease accessory gene. The nucleic acid molecule is chosen from ureA, ureB, ureE, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, a vaccine for preventing onstead protein encoded by the nucleic acid, a vaccine for preventing a nucleic acid and a carrier, and an isolated attibody or its binding portion raised against the nucleic acid. The nucleic acids, proteins and antibodies are useful for vaccinating mammals against onset of disease caused by infection of H. bizzozeronii, which involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleotide sequence as a probe in a nucleic acid and detecting any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents the H. bizzozeronii ureA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        55.2%; Score 652; DB 8; Length 234; 57.3%; Pred. prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonla typhi, Klebsiella pneumoniae, Beeudomonae aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense mucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense mucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to antisense inhibitors of genes essential to

Urease A (AAW07193) and B (AAW07194) subunits of Helicobacter pylori are encoded by the ureA + ureB gene locus of clinical isolate CPM630.
Vectors, e.g. pORV214 (see also AAT44351), carrying the gene locus can be used to transform host cells for the large-scale prodn. of recombinant, enzymatically inactive, multimeric urease. The urease complex induces a mucosal immune response that can treat or prevent Helicobacter, esp. H.
pylori, gastroduodenal infection. (Updated on 16-OCT-2003 to standardise
                    Vaccine for inducing mucosal response to Helicobacter - contg. multimeric urease complex and pref. an antibiotic, anti-secretory agent or bismuth

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, pseudomonas aeruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in celectronic format directly from WINDO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Carr GJ;

This invention describes a novel method for the preparation of a vaccine based on T cell-stimulating peptide sequences. The method comprises (1) identifying potential Mic (major histocompatibility complex)-binding and T cell-reactive epitopes in a target protein; (2) eliminating cross-reactive epitopes, and (3) verifying remaining epitopes by determining their activity in vitro and/or in vivo. The products of the invention have antibacterial, antiulcer, antinflammatory, cytostatic, virucide, protozoacide and immunosuppressive activity. The vaccine is especially used to protect against infection by Helicobacter pylori, but more generally can be prepared from proteins from any pathogen (virus, bacterium, protozoan) or tumour, or associated with autoimmune disease. Synthetic epitopes that are more immunogenic than natural sequences can be identified, and the vaccine may have increased immunogenicity (when formulated with adjuvant) or immunotolerance (formulated without an adjuvant). This sequence represents the urease A protein PA4 described in
                                                                                                 61 GRILLKPDDVMDGVASMIHEVGIEAMFPDGTKLVTVHTPIEANGKLVPGEL-FLKNEDIT 119
                                                                                                                                                                              Urease A; vaccine; T cell-stimulating peptide; antibacterial; antiulcer; MHC; major histocompatibility complex; epitope; antiinflammatory; cytostatic; virucide; protozoacide; immunosuppressive; pathogen; tumour; autoimmune disease; Helicobacter pylori infection.
Preparing vaccine containing T cell-stimulating peptides, useful particularly for protection against Helicobacter pylori, by selecting epitopes from target proteins.

The invention relates to inducing an immune response against Helicobacter in a mammal, comprising mucosally administering to the mammal an attenuated Salmonella vector containing a nucleic acid molecule encoding a Helicobacter antigen, and parenterally administering to the mammal a Helicobacter antigen, and parenterally administering to the mammal a Helicobacter antigen. Also included is an attenuated Salmonella vector comprising a nucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen is a urease, a urease subunit, or its immunogenic fragment (encoded by the urea and urea genes). The mammal is at risk of having but does not have Helicobacter infection or has a Helicobacter infection. The attenuated Salmonella vector further comprises an htra or nirB promoter. The vector can be used in inducing an immune response against Helicobacter in a mammal. The vector can be used to treat Helicobacter infection. The vector and the method can be used to treat

Helicobacter induced gastroduodenal diseases, including acute, chronic or

```
atrophic gastritis, peptic ulcer diseases (e.g. gastric or duodenal ulcers), and gastric carcinoma. Attenuated Salmonella vector pHUR3 was constructed expressing UreA and UreB and including an E. coli AmpR gene. The present sequence represents a protein or peptide encoded by the pHUR3 plasmid. NOTE: pHUR3 is represented by both ABB5512 and ABB55130, the peptides expressed by pHUR3 are shown in the sequence listing to be split between ABB55112 and ABB55130, yet Figure 4 shows all the peptides being expressed by the one sequence, therefore all encoded peptides are cross-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a protein having a specific region of primary structure of the beta-subunit Helicobacter pylori urease, appearing as ADS09176 (amino acids 201-318 of the beta subunit) or a sequence which generates antibodies that suppresses proliferation of H. pylori and which suppresses urease activity of H. pylori by an immune reaction. vaccine against H. pylori. The present invention describes generating monoclonal antibodies against the urease using hybridoma techniques that are useful for passive immunisation and diagnostic techniques. Furthermore, the antibacterial peptide can be used to immunise an animal in order to produce antibodies that are present within a functional food such as milk or eggs. This polypoptide sequence is the H. pylori urease alpha subunit protein of the invention.

inducing an antibody response, such that it can be used to develop a

```
H. pylori comprising the urease fragment, a transformed cell transformed by introducing the gene, an antibody which recognises the urease fragment and transforming a plant by introducing the gene into the plant and making it express. The urease fragment is useful for producing blood serum containing antibodies which suppresses proliferation of H. pylori and which suppresses urease activity of H. pylori which involves immunising a living organism (e.g. a human, cow or hen) with the urease fragment. The fragment may be purified from cow's milk or hen eggs from transgenic animals expressing the fragment. H. pylori is thought to be a cause of gastric and peptic ulcers, gastritis and may be implicated in stomach cancer. The urease enzyme is thought to be responsible for maintaining the bacterium in the acid conditions of the stomach. The present sequence is the H. pylori urease alpha subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 CMHFLKKDEVMPGVGNMVPDLGVEATFPDGTKLVTVNWPIEPDEHFKAGEVKFGCDKDIE 120

```
The sequence of the Helicobacter felis urease ureA gene product (given in AAR67311) was compared to ureases of Helicobacter pylori (AAR67375), Proteus mirabilis (AAR67376) and jack bean urease (AAR67377) and regions of homology were identified. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA from Helicobacter pylori and Helicobacter felis - used to develop prods. for detection, treatment and prevention of Helicobacter infection

This invention relates to a novel immunogenic peptide that induces production of antibodies against the Helicobacter pylori (H. pylori) urease protein. Specifically, it refers to a peptide antigen capable of

New peptide useful as a vaccine against Helicobacter pylori induces an antibody response against the bacterial urease.
